Haruno × **Stellar**

The month-end close for companies on Stellar

Haruno reads the company's wallets, values its stablecoins and tokenised real-world assets, closes the books on them, and lets an investor verify the result on chain.

Scale path | Existing product, new Stellar module | Built at HackMeridian: real-world assets

THE PROBLEM

The money arrives in seconds.
Closing the books on it takes days.

Accountants know the books, not the chain.

1

The wallets are invisible to the books

QuickBooks can't read Stellar. Someone exports a CSV from an explorer, wallet by wallet.

2

So they're matched and booked by hand

Payments matched to invoices by eye. A transfer between the company's own wallets booked as income; a tokenised bond as "crypto".

3

And the result is hard to verify

The investor gets a PDF, with no easy way to check it against the chain.

Why now Japan and the US are writing the rules for stablecoins (ASBJ draft No. 74, FASB draft), and Stellar already holds $3–4B of tokenised funds and bonds.

WHAT IT IS

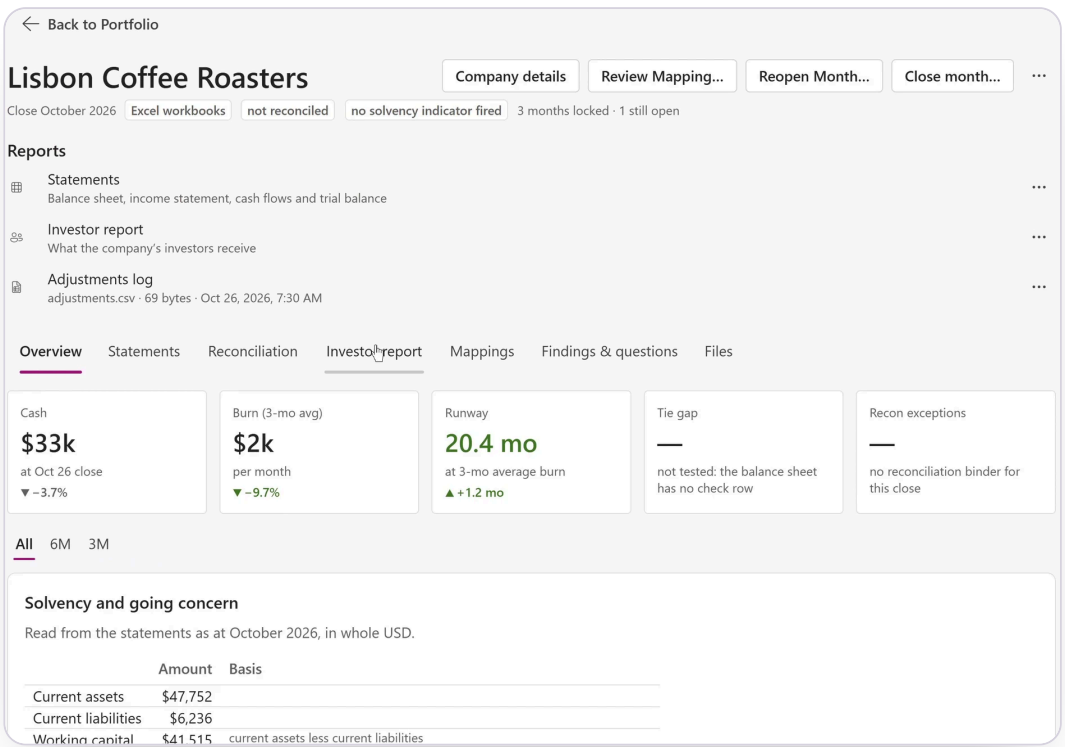

Haruno: figures computed by rules, organised and explained by AI

1 **A Windows app with users today**
Reads QuickBooks or Yayoi books for a portfolio of companies.

2 **Closes the month**
Statements, reconciliation of every account, investor report.

3 **Asks the right questions**
Findings in plain language and drafted questions for management.

+ **New: Stellar**
A separate module, one switch to turn it on.

Real screen: the CFO company page

TRACTION

Not an idea: a product in pilots today

Taiwan
Pilot with NYCU's IAPS incubator and its 20 portfolio companies

United States
5 finance professionals testing it, including tax accountants

Japan
Based in Fukuoka, Japan, working with local companies

3rd prize · Taiwan Best AI Awards, April 2026

Stellar

Stellar builders · Delivered & maintain 3 separate projects

TAcc+ · International startup program, Taiwan, July 2026

TEAM

Formal-methods engineering meets finance

Georgii Plotnikov

Founder, CEO & CTO

10+ years delivering software for Microsoft and EY. Formal-verification specialist; designed the Inference programming language. Leads Haruno engineering.

Dominik Hinkleman

Strategy & Business Development

9 years building ventures across Web3, VR/AR and digital marketing. Leads strategy, partnerships and customer research.

Inferara, Fukuoka · Stellar Community Fund builders · Haruno in pilots in Taiwan and the US

WHAT CHANGED AT HACKMERIDIAN

What existed before, and what we built here

BEFORE THE EVENT · OCT 20–24 · DECLARED

Haruno, in use today
Closes the month from QuickBooks or Yayoi: statements, every account reconciled, findings, the investor report

Stellar module
Named wallets, monthly sync, internal transfers, Japan / US classification, sign-off

On-chain and off-chain in one close
Wallets reconciled against the books, in one set of statements for the tax accountant

Open parts on GitHub
Two Soroban contracts with tests; payer, sign-off and verifier pages; the monthly snapshot format

AT HACKMERIDIAN · OCT 25–26

Tokenised real-world assets, valued in Haruno
USDY at its on-chain NAV, BENJI and WTGX at their stated NAV, bonds at market price. An open registry and a live page to check them

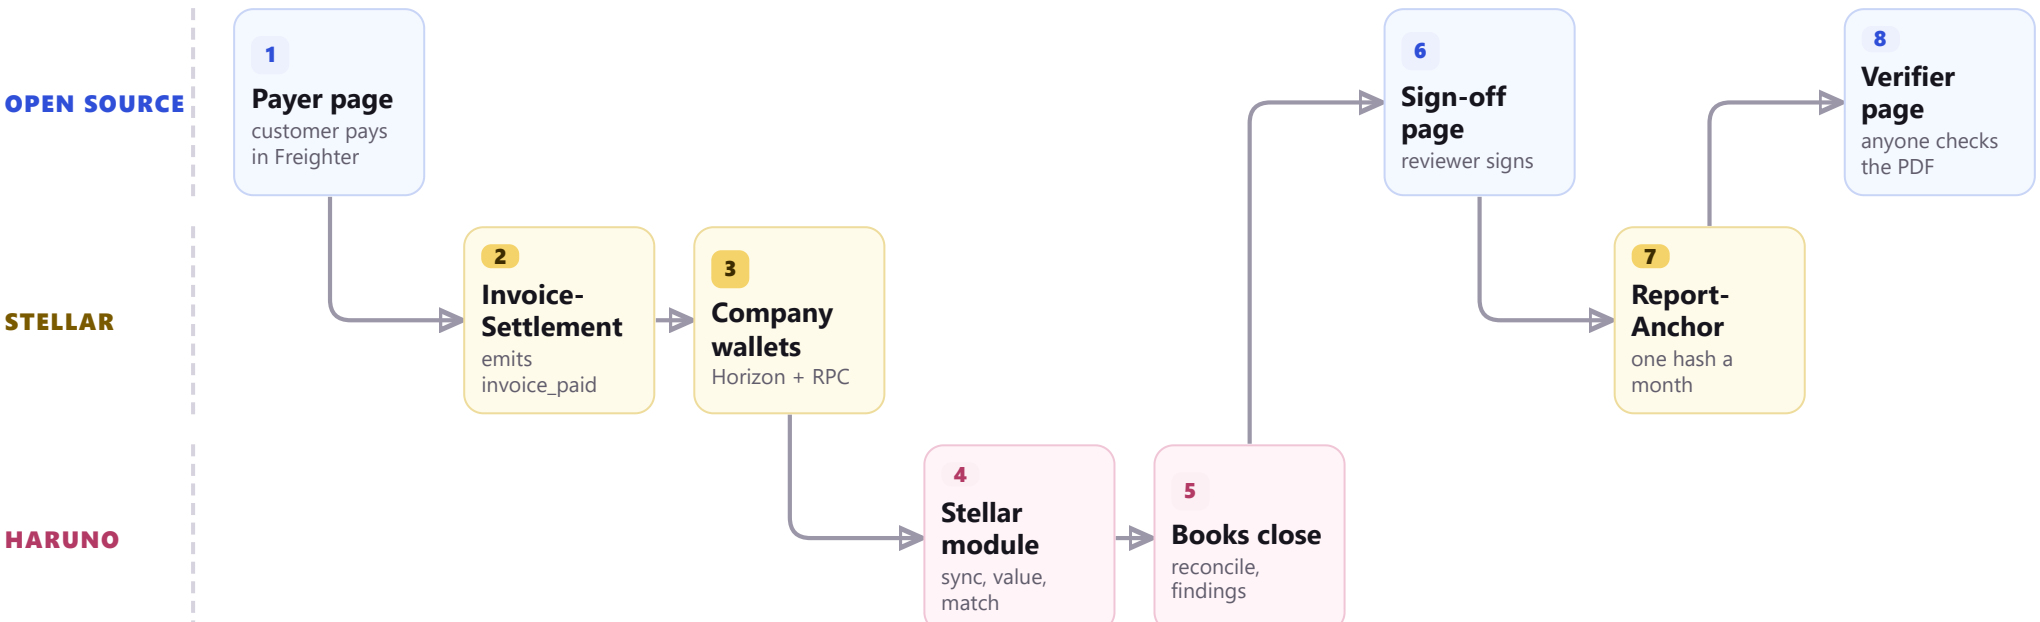

Tracked under real accounting standards
Tokenised bonds and money-market fund shares get their proper treatment under Japanese and US rules, not "crypto". Shipped to Haruno users on Oct 25

A full demo month on testnet
4 wallets, invoices, transfers and a tokenised bond

Every change since the tag: github.com/Inferara/stablecoin-close/compare/pre-hackmeridian...main

HOW IT WORKS

From a payment on Stellar to a report anyone can verify

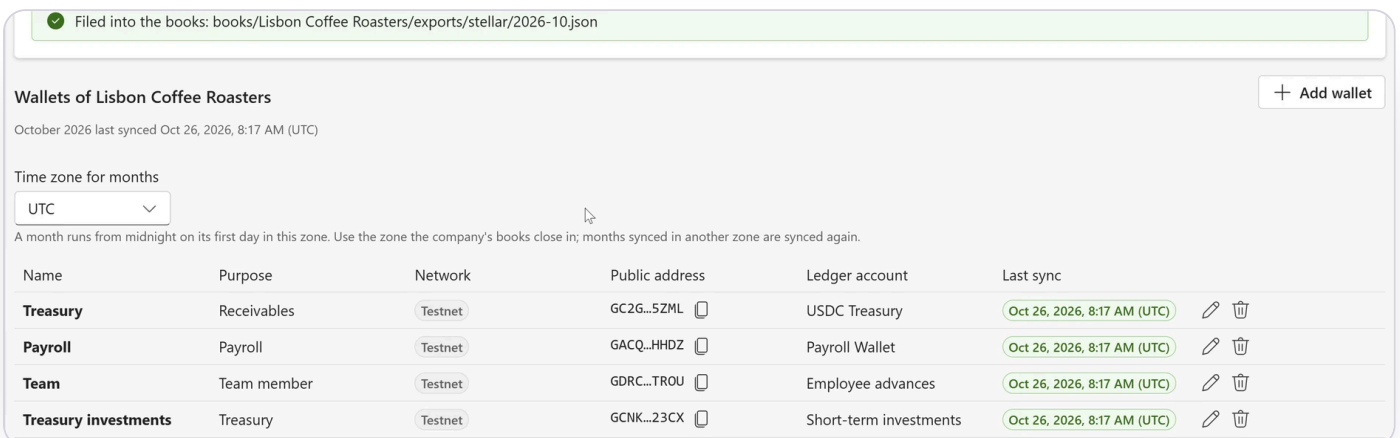

- Blue: Apache-2.0, on GitHub
- Yellow: public Stellar network
- Pink: inside Haruno

- Hand-off between 4 and 5: one verified file per month, in an open format.

Haruno never holds a key: people sign in their own wallet

DEMO · 1 OF 5

Named wallets, read-only, each mapped to the books

Four named wallets

Treasury, Payroll, Team and Treasury investments, each mapped to a ledger account.

Notes and explorer links

Each sync explains itself in plain notes, and every transaction is one click from StellarExpert.

Sync now

Reads the month from Stellar and files it into the company's books.

Internal, or a conversion

Treasury → Payroll, or XLM swapped for a bond in one wallet, is never income or spending.

Paid through the contract

The invoice_paid event matches the invoice with certainty. A memo-only payment is flagged for review.

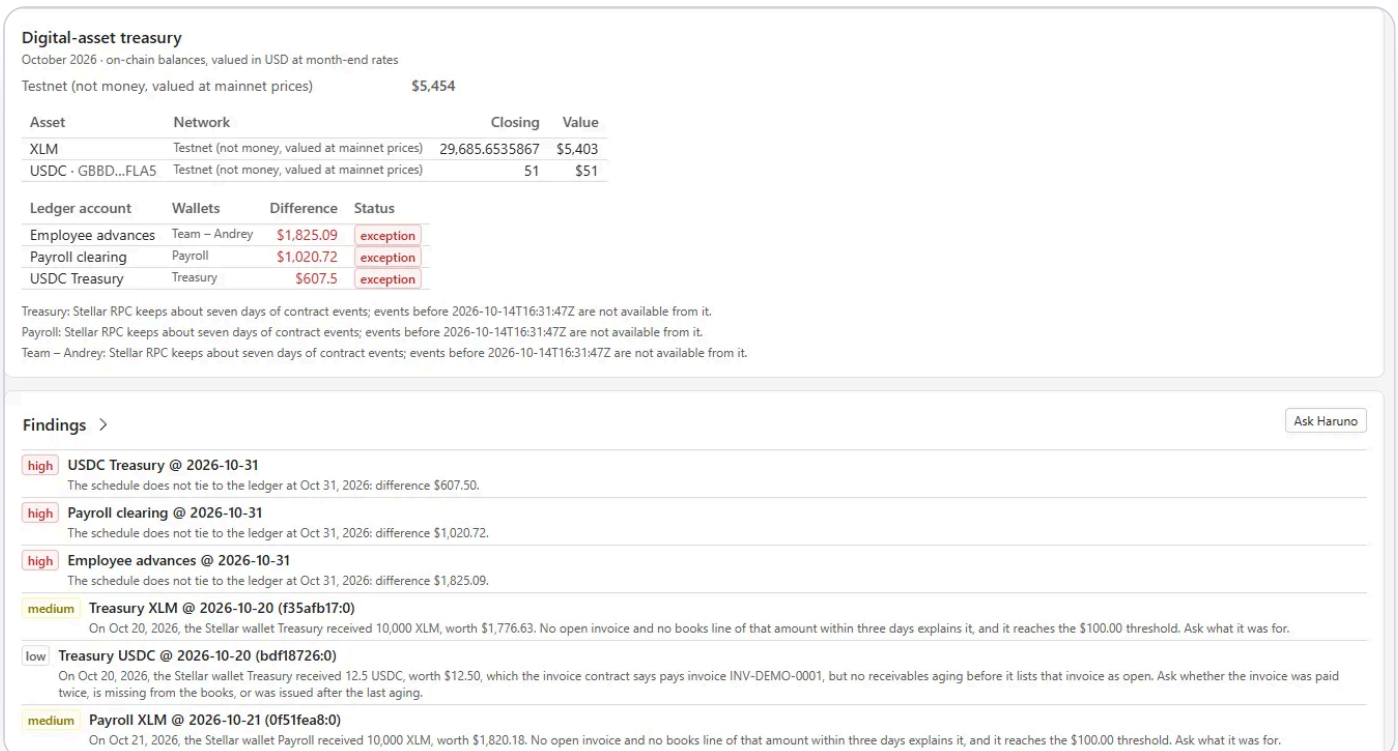

USD and JPY

At the time of each payment, with the price source recorded.

DEMO · 3 OF 5

The month-end close checks the books against the chain

Digital-asset treasury

October 2026 · on-chain balances, valued in USD at month-end rates

Testnet (not money, valued at mainnet prices) $5,454

Asset	Network	Closing	Value
XLM	Testnet (not money, valued at mainnet prices)	29,685.6535867	$5,403
USDC · GBBD...FLA5	Testnet (not money, valued at mainnet prices)	51	$51

Ledger account	Wallets	Difference	Status
Employee advances	Team – Andrey	$1,825.09	exception
Payroll clearing	Payroll	$1,020.72	exception
USDC Treasury	Treasury	$607.5	exception

Treasury: Stellar RPC keeps about seven days of contract events; events before 2026-10-14T16:31:47Z are not available from it.
Payroll: Stellar RPC keeps about seven days of contract events; events before 2026-10-14T16:31:47Z are not available from it.
Team – Andrey: Stellar RPC keeps about seven days of contract events; events before 2026-10-14T16:31:47Z are not available from it.

Findings >

Ask Haruno

high **USDC Treasury @ 2026-10-31**
The schedule does not tie to the ledger at Oct 31, 2026: difference $607.50.

high **Payroll clearing @ 2026-10-31**
The schedule does not tie to the ledger at Oct 31, 2026: difference $1,020.72.

high **Employee advances @ 2026-10-31**
The schedule does not tie to the ledger at Oct 31, 2026: difference $1,825.09.

medium **Treasury XLM @ 2026-10-20 (f35afb17:0)**
On Oct 20, 2026, the Stellar wallet Treasury received 10,000 XLM, worth $1,776.63. No open invoice and no books line of that amount within three days explains it, and it reaches the $100.00 threshold. Ask what it was for.

low **Treasury USDC @ 2026-10-20 (bdf18726:0)**
On Oct 20, 2026, the Stellar wallet Treasury received 12.5 USDC, worth $12.50, which the invoice contract says pays invoice INV-DEMO-0001, but no receivables aging before it lists that invoice as open. Ask whether the invoice was paid twice, is missing from the books, or was issued after the last aging.

medium **Payroll XLM @ 2026-10-21 (0f51fea8:0)**
On Oct 21, 2026, the Stellar wallet Payroll received 10,000 XLM, worth $1,820.18. No open invoice and no books line of that amount within three days explains it, and it reaches the $100.00 threshold. Ask what it was for.

Book vs chain

Each mapped ledger account against what the wallets hold.

Findings in plain words

"Received 3 USDC… no open invoice explains it. Ask what it was for." The same for 60 XLM nobody booked.

Investor report

A new Digital-asset treasury section.

Small amounts on purpose: testnet faucets hand out a few USDC and XLM at a time. A real month has the same shape at full size

DEMO · 4 OF 5

Same holdings, Japanese or US treatment

Japan (ASBJ)

Asset	Balance-sheet line	Cash-flow class	Valuation
XLM 49.99991 · $8.41	**暗号資産 (crypto assets)** Crypto asset (暗号資産)	Not funds: outside cash and cash equivalents	Market price where an active market exists; otherwise cost, less impairment ASBJ PITF No. 38
EURC 8 · $8.95	**暗号資産 (crypto assets)** Crypto asset (暗号資産)	Not funds: outside cash and cash equivalents	Market price where an active market exists; otherwise cost, less impairment ASBJ PITF No. 38
USDC 15 · $15.00	**電子決済手段 (electronic payment instruments), current assets** Electronic payment instrument (電子決済手段) Draft	Funds (資金): part of cash and cash equivalents	Face value; a non-USD coin is translated at the closing rate ASBJ PITF No. 45; ASBJ ED No. 74
CETES 284.2319674 · $18.01	**有価証券 (securities), current assets; 投資有価証券 if held beyond a year** Securities (有価証券)	Not funds: outside cash and cash equivalents	By holding purpose: trading at market value through profit; held to maturity at amortised cost; other securities at market value through net assets ASBJ PITF No. 43; ASBJ Statement No. 10

United States (FASB)

Asset	Balance-sheet line	Cash-flow class	Valuation
XLM 49.99991 · $8.41	**Crypto assets, shown apart from other intangible assets** Crypto asset in scope of ASC 350-60	Not cash: purchases and sales are investing activities	Fair value, with changes in net income FASB ASU 2023-08 (ASC 350-60)
EURC 8 · $8.95	**Cash and cash equivalents** Cash equivalent in a foreign currency Draft	Cash and cash equivalents	Par value in EUR, translated to USD at the closing rate (ASC 830) FASB proposed ASU: payment stablecoins as cash equivalents; ASC 830
USDC 15 · $15.00	**Cash and cash equivalents** Cash equivalent Draft	Cash and cash equivalents	Par value in USD FASB proposed ASU: payment stablecoins as cash equivalents
CETES 284.2319674 · $18.01	**Investments in debt securities** Debt security, outside ASC 350-60	Not cash: purchases and sales are investing activities	By intent: trading or available-for-sale at fair value; held-to-maturity at amortised cost FASB ASC 320

USDC in Japan: 電子決済手段, counted as funds

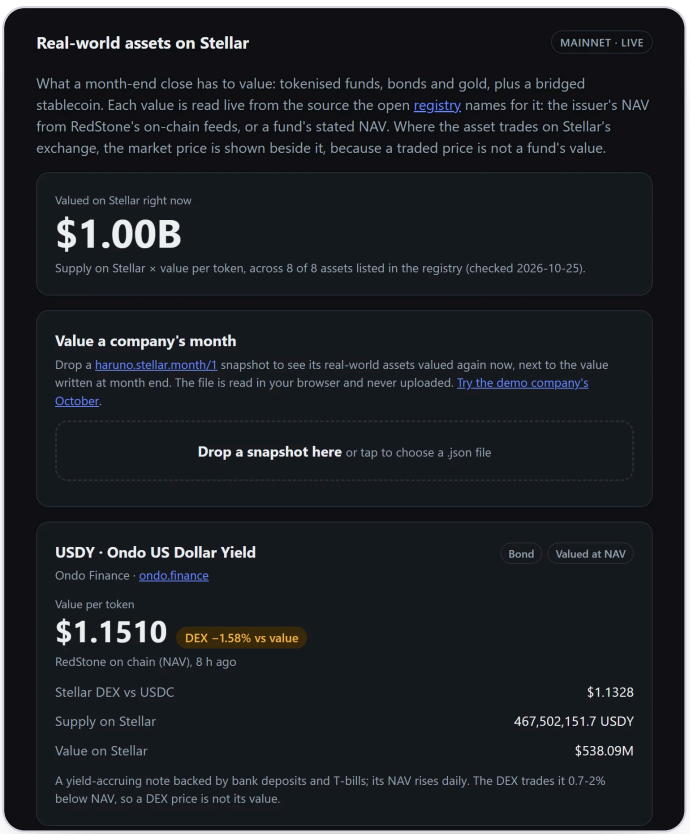

USDC in the US draft: cash equivalent

Draft rules labelled

New: a tokenised bond is 有価証券 in Japan, ASC 320 in the US

BUILT AT HACKMERIDIAN · REAL-WORLD ASSETS

Tokenised funds and bonds, valued at NAV

NAV, not the DEX price

USDY at its NAV, read on chain from RedStone; its DEX price runs 0.7–2% lower.

Stated NAV, or the mainnet twin

BENJI and WTGX at 1.00; a testnet bond at its mainnet twin's price.

Booked as a security

The demo's tokenised Mexican bond (CETES): 有価証券 in Japan, ASC 320 in the US.

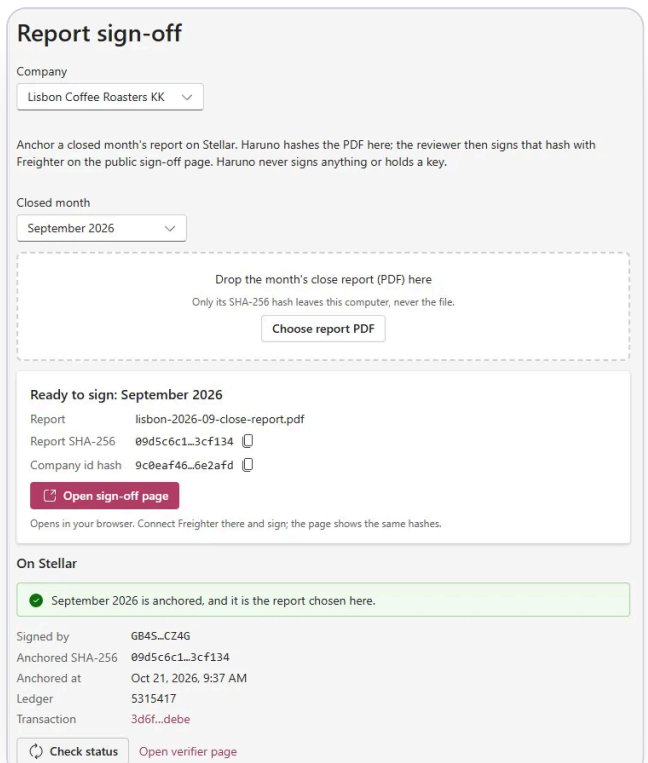

$1.0B of Stellar's $3–4B, so far

The 8 assets with a public value source. Soroban-only Spiko, about half the total, isn't in it yet.

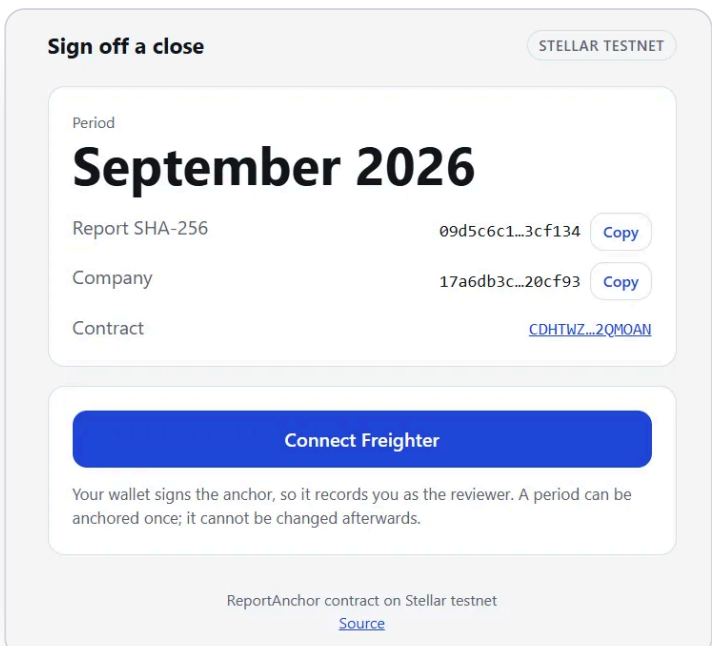

Live on mainnet: inferara.github.io/stablecoin-close/pages/rwa · open registry in the repo

DEMO · 5 OF 5

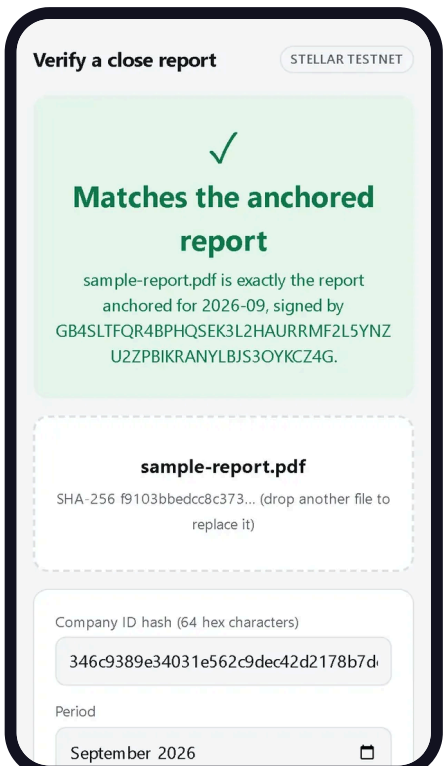

Sign off in your own wallet. Anyone can verify.

Haruno hashes the report, then reads the anchor back

Reviewer signs in Freighter → ReportAnchor

Investor drops in the PDF: matches

Only the hash goes on chain; the PDF never leaves the computer

HOW THIS DIFFERS

Others move or copy the money. Haruno reviews it.

Settle invoices

Pay an invoice on chain.

StellarInvoice, InvoiceVeil, Settler, ProofPay and 5 more hackathon builds

Sync transactions

Copy wallet activity into a ledger or tax export.

Bitwave, KwickBit, LedgersTax, Kryptos

Review the close

- reconcile several wallets against books and invoices
- raise findings
- classify per standard
- value tokenised assets at NAV
- a close an investor can verify

One close

On-chain wallets and off-chain books in the same statements

Open

Contracts, pages, snapshot format: Apache-2.0

Shipped

In a product with users, tested end to end

THE ASK

Everything a company holds on Stellar, closed with confidence

RWA issuers

Ondo, Franklin Templeton, WisdomTree, Etherfuse: their holders need books at NAV, classed per standard.

Pilots and accountants

Companies paid in USDC or EURC on Stellar; accountants to confirm the Japan and US rules.

SCF next

Soroban-only assets such as XAUm, passkey sign-off, payouts approved in the user's wallet.
